# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casuals, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

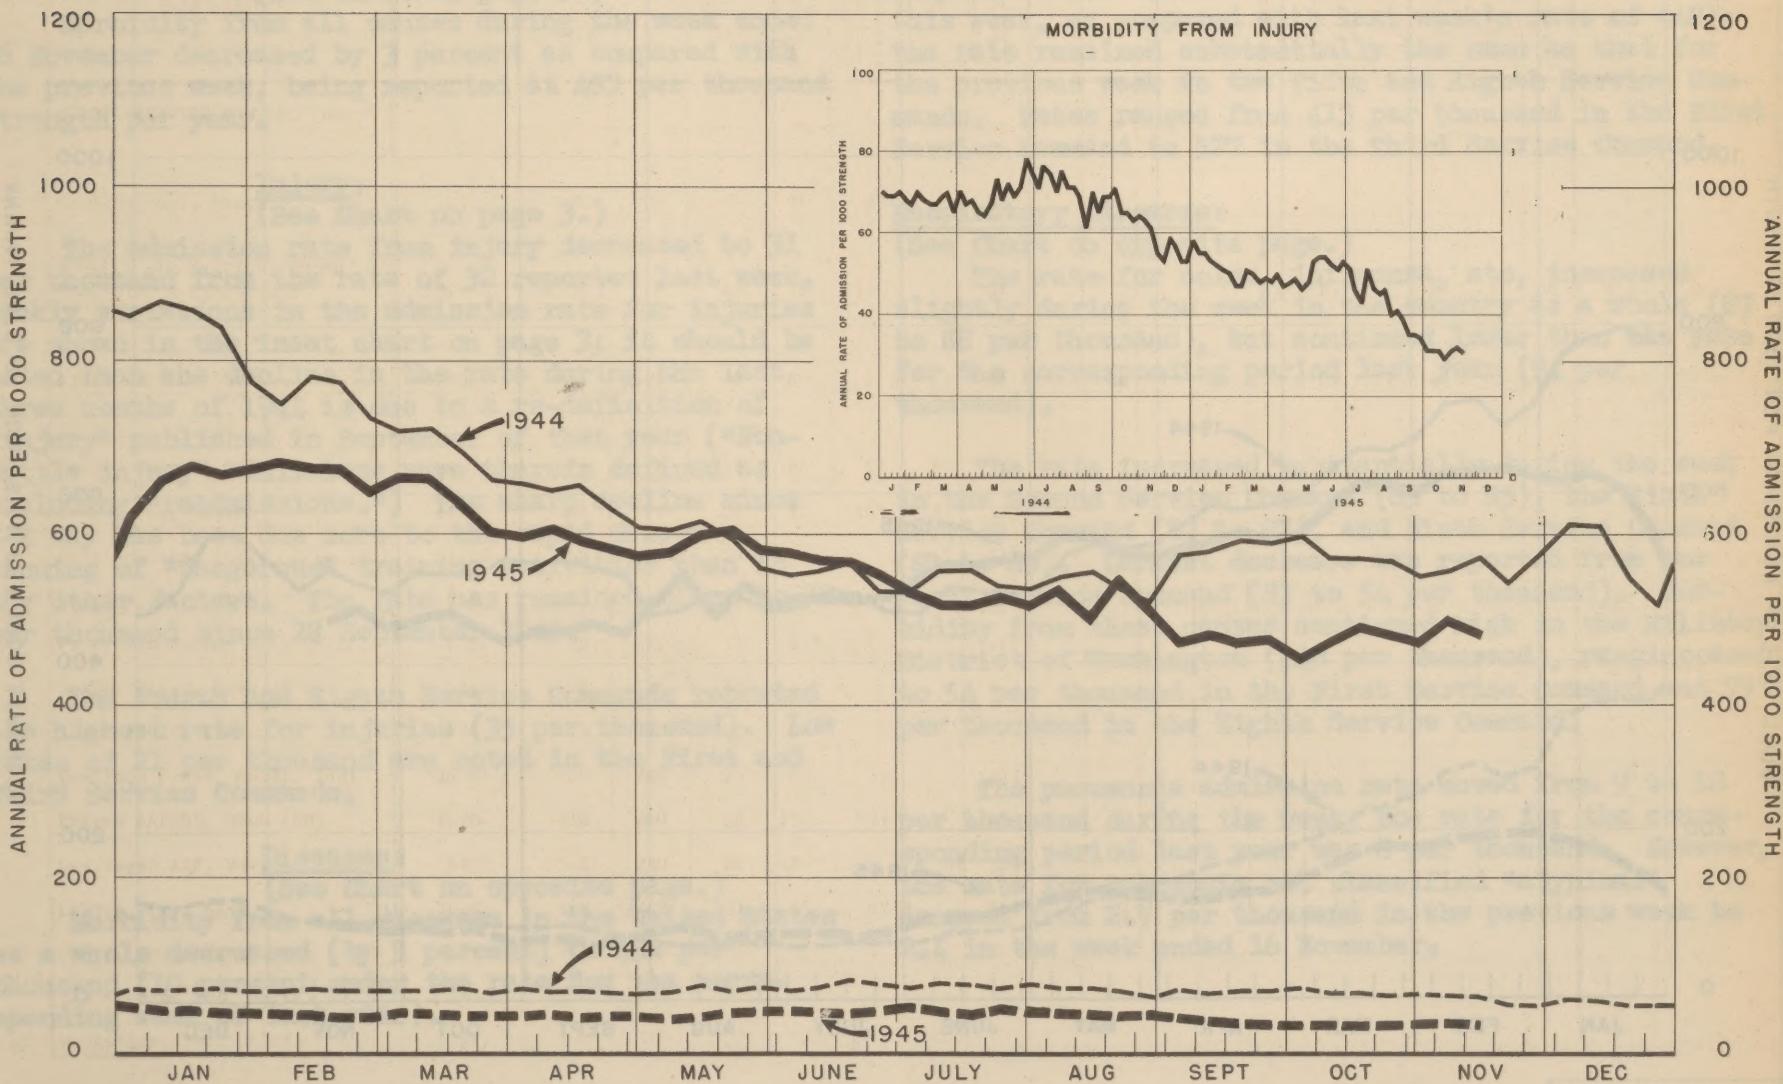

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

## COMMENT ON CURRENT TRENDS

### MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 16 November decreased by 3 percent as compared with the previous week, being reported at 483 per thousand strength per year.

### Injury:

(See Chart on page 3.)

The admission rate from injury decreased to 31 per thousand from the rate of 32 reported last week. Weekly variations in the admission rate for injuries are shown in the inset chart on page 3; it should be noted that the decline in the rate during the last three months of 1944 is due to a re-definition of "injury" published in September of that year ("Non-battle injury" admissions were therein defined as excluding "readmissions.") The sharp decline since V-E day has been due more to the rapid discontinuing of "dangerous" training activities than to any other factors. The rate has remained close to 30 per thousand since 28 September 1945.

The Fourth and Eighth Service Commands reported the highest rate for injuries (35 per thousand). Low rates of 21 per thousand are noted in the First and Third Service Commands.

### Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole decreased (by 3 percent) to 452 per thousand (10 percent under the rate for the corresponding week of last year).

The disease admission rate increased perceptibly only in the Sixth Service Command (513 per thousand this week, as compared with last week's rate of 448); the rate remained substantially the same as that for the previous week in the Fifth and Eighth Service Commands. Rates ranged from 413 per thousand in the First Service Command to 527 in the Third Service Command.

### Respiratory Diseases:

(See Chart on opposite page.)

The rate for colds, influenza, etc., increased slightly during the week in the country as a whole (87 to 88 per thousand), but continued lower than the rate for the corresponding period last year (94 per thousand).

The rate increased substantially during the week in the Second Service Command (63 to 85), the Sixth Service Command (82 to 97), and Ninth Service Command (81 to 89). Largest decrease was reported from the First Service Command (83 to 54 per thousand). Morbidity from these causes continued high in the Military District of Washington (140 per thousand), ranging down to 54 per thousand in the First Service Command and 79 per thousand in the Eighth Service Command.

The pneumonia admission rate moved from 9 to 10 per thousand during the week, the rate for the corresponding period last year was 8 per thousand. However, the rate for pneumonia not classified "atypical" dropped from 2.7 per thousand in the previous week to 2.4 in the week ended 16 November.

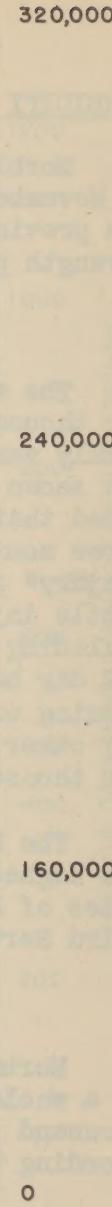

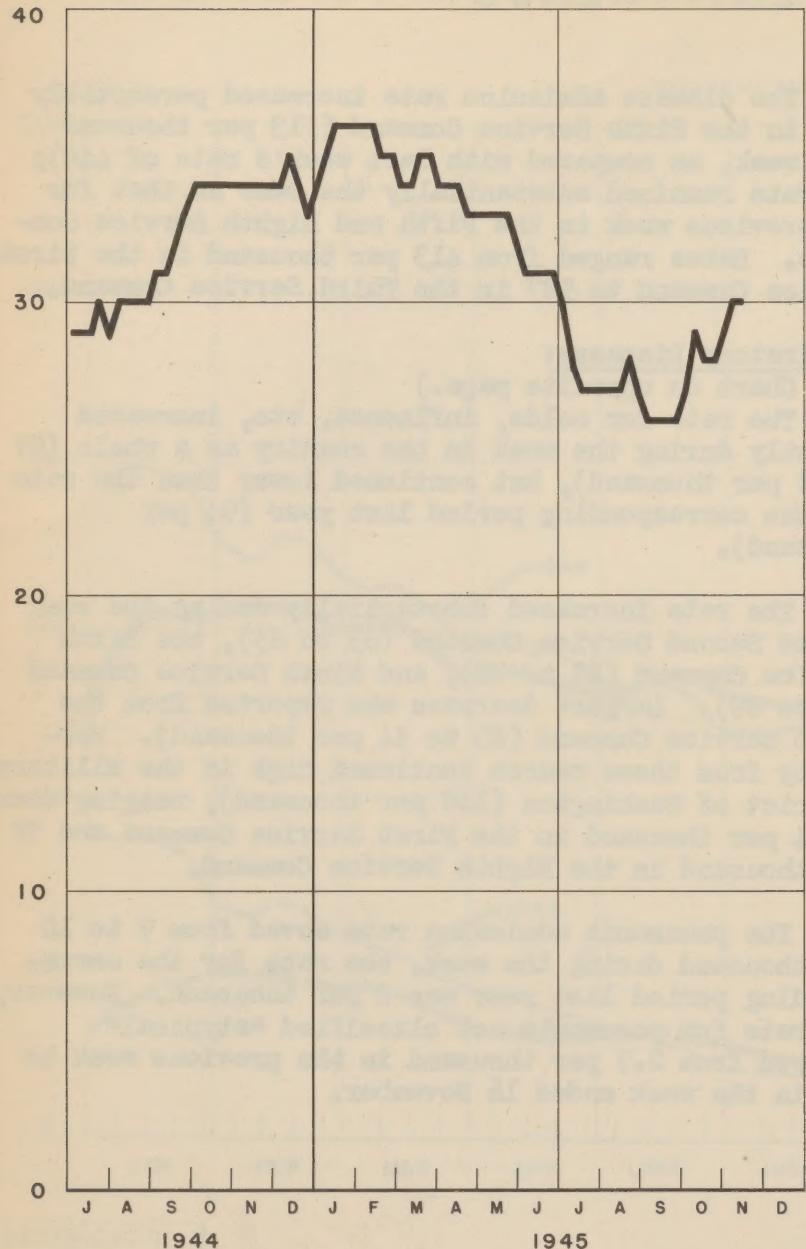

## NONEFFECTIVE RATE

CONTINENTAL UNITED STATES

## PATIENTS REMAINING IN HOSPITAL

CONTINENTAL UNITED STATES

AVERAGE NUMBER OF NONEFFECTIVES PER 1000 STRENGTH

## COMMENT ON CURRENT TRENDS (CONT'D)

The rate for all classifications of pneumonia increased markedly in the Sixth Service Command (7 to 12 per thousand). Atypical pneumonia rates increased from 4 to 8 per thousand in the week, while that for other classifications moved from 3 to 4.

Venereal Diseases:

Morbidity from venereal diseases (excluding EPTS cases) decreased by 5 percent during the week to 63 per thousand per annum.

Morbidity from these causes was highest in the Fourth Service Command, although the rate decreased slightly during the week to 95 per thousand, from the unusually high rate of 97 per thousand reported last week. Largest increase was noted in the First Service Command (to 47 per thousand, from the rate of 31 per thousand in the week before).

Other Communicable Diseases:

Morbidity from diarrhea and dysentery remained low (5 per thousand). An outbreak of common diarrhea in the Army Specialist Training Unit in and near Boston resulted in a rate of 26 per thousand in the First Service Command. The Second Service Command reported a rate of 7 and the Ninth a rate of 8 per thousand; other service commands had rates below 5 per thousand.

NON-EFFECTIVE RATE:

(See Chart on page 6)

The non-effective rate for personnel stationed in the continental United States is estimated at 29.9 per thousand strength for the week ended 16 November as compared with 33.8 per thousand for the corresponding week of 1944.

PATIENTS REMAINING UNDER TREATMENT: 16 NOVEMBER 1945:  
(See Chart on pages 6.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 197,471, as compared with 205,075 at the end of the previous week.

The number of neuropsychiatric cases remaining was 15,927 or about 1200 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 33,500. The number of battle casualty patients remaining decreased by about 3000 to number 55,143.

CERTIFICATES OF DISABILITY FOR DISCHARGE:  
(See Chart on page 9.)

In the week ended 16 November there were 7712 enlisted personnel discharged by CDD, a decrease of about 1200 as compared with the previous week. Fifty-two percent of these discharges were reported by general hospitals and 29 percent by convalescent hospitals. Among these CDD's were 1727 neuropsychiatric cases, about the same as the previous week.
